

Supplying Critical Communications in the Wake of Hurricane Dorian

BACKGROUND

Squire Tech is a VNO whose main business is providing mobile satellite internet trailers (called pComs) for public safety and enterprise clients. When Squire Tech's customers deploy a pCom, they need bandwidth to work instantly and without hassle, so they can focus on more critical operations.

SOLUTION

By deploying Datadragon, Squire Tech helped their clients across 200 sites see, understand, and manage their bandwidth in real time.

OUTCOME

Now, Squire Tech's customers don't have to wait to get the bandwidth they need. Squire Tech can monitor which trailers are active and which are not and then channel bandwidth to where it's needed most, to prioritize critical applications such as VoIP, and to manage hybrid networks. Squire Tech's customers can also see their bandwidth allocation and upgrade capacity instantly for seamless, reliable connectivity in times of need.
